Description of Proposal

White cypress sawlogs and residue will be harvested under regulation of the Integrated Forest Operations Approval for South-Western Cypress Region.

The operation will use mainly mechanical harvesting and processing to produce logs and forward them to dumps. The logs will be removed from the forest by truck.

Natural regeneration is planned. No after-harvest burning or planting is proposed.

Attachment 1: Site Safety Plan prescribes the safety requirements and Medical Emergency Evacuation Plan for this harvesting operation.

No construction, reopening or upgrading of roads or bush tracks is proposed. Prescriptions for maintenance of existing roads and tracks are specified below.

Area Identification and Yield Estimates

State Forest	Compartment/s	Region	Management Area	Plan Number
Nangerybone	239	Western	Condobolin	36772

COMPARTMENT	239	
Plan Compartment ID	48159	
Gross Area (ha)	229	
Net Harvest Area (ha)	168	
High Density Area (Y/N)	Yes	
Estimated Yield Cypress	600	
Sawlog (m ³ or t)	cu.m	

Silviculture and Harvesting Prescriptions

The planning area has reliable records going back to the 1950's, which indicate very little silvicultural treatment.

The mature cypress stands within compartment 239 were established during regeneration events in the 1890's. There has been little or no thinning in the compartment, apart from the control of hardwood species in the very early years of management.

Establishment of regeneration has been very haphazard, although quite prolific in places, and possibly influenced by grazing activities conducted during the 1960's to 1990's. This has created a mixed stand requiring the integration of both release and thinning silvicultural treatments.

Where possible the area of each silvicultural treatment must be mapped and recorded in the Post-logging information section of this plan.

Silvicultural Planning

The 'release' operation is aimed at releasing established regeneration from competition with the mature over-storey. Once released, the stand will require thinning in the next 15-20 years.

The cypress thinning operation is aimed at reducing competing stems whilst concentrating growth on the retained, higher quality, future sawlogs. This stand will require further thinning in around 15-20 years.

Harvesting Prescription

Stand type	% of net area	Area (refer to HPOM for details)	Treatment Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – South-Western Cypress v.3 for more detail.
Mature Cypress with adequate regeneration.	60%	Comp't 239	Release cypress silviculture.
Mature Cypress without regeneration	40% NHA	All	Thinning silviculture

The SFO will ensure that all relevant tree retention and silvicultural prescriptions are met during harvesting operations.

The operation must, as far as practicable, not damage individual plants of good form regeneration or sapling size of white cypress or ironbark, especially where there are few others nearby.

Tree Marking

The area will be tree marked for **retention**. The operation must, as far as practicable:

- For the allowed species, fall each tree not marked for retention, unless it clearly does not meet the product standard, and
- Not fall or damage trees marked for retention, or marked as boundary trees.

4. Special Conditions

Critical boundaries

The Compartment is bounded by roads on the eastern and southern sides, and fences on the western and northern sides. Refer to the Operational map for more detail. Marking of the compartment boundary is not proposed.

Access will be onto the Vermont Hills Road, and care should be taken when exiting the forest.

<u>Private Property</u> – not applicable.

National Park – not applicable.

Research / Inventory Plots

No research plots or trials are known in this compartment.

However, there are temporary inventory plots within the harvest area, which if encountered should be ignored

Leases/OPs

The area is or may be subject to grazing under Grazing Permit.

Infrastructure

- Fences. No fence may be damaged except at places approved by the Supervising Forest Officer. Any damage to a fence by the Contractor must be immediately reported to the lessee via the Supervising Forest Officer and fixed immediately by the Contractor.
- Gates and roads. The Contractor must keep the gate(s) on the property as found (open or closed). Existing roads must not be blocked or damaged. Any damage must be repaired immediately.
- Debris. Logging debris must be prevented from accumulating within 5 metres of any protected tree during a logging operation. If it does accumulate. Then it must be flattened to a height less than one metre, minimising disturbance to the ground.
- Apiary Sites. There are no apiary sites on the harvest area. However, if a site is found then a 20m buffer must be applied around each bee hive encountered.

Transmission Lines/Cables/Pipelines

No electrical transmission lines are present within the harvest area. However, contractors are reminded that if they encounter a transmission line then:

Harvesting machinery must not operate within 20m of this transmission line.

Forest Management Zoning Conditions

FMZ 3A Wildlife linkages exist along the drainage lines in the western and northern parts of the harvest area, and are wholly contained within the assigned drainage buffers. No access is allowed through these zones without approval.

FMZ 4 'General Management' occurs within the compartment (shown on HPOM). Normal harvesting prescriptions apply in this area.

Cultural Heritage Conditions

There are no cultural heritage sites (Aboriginal or non-Aboriginal) known in this compartment. If a site that might be a cultural heritage site is found:

- Its location must be promptly reported to the Forestry Office via Supervising Forest Officer.
- A 20m no-harvest zone must be applied around this site until advised otherwise.

Note: Records indicate the location of "Mambill Tank" (although there are is no physical evidence) outside the forest on the north east corner of the harvest area. Activities are not prescribed there, but care should be taken if accessing this location.

Flora and Fauna Conditions

A stick nest of unknown species was recorded in the traverse. The SFO should watch out for this and any others and apply prescribed protection if found.

The SFO must search for threatened species and mark-up the block as per the Standard Harvest Plan Conditions for Native Forest Operations in Western Region. -South-Western Cypress v.3.

Mark-up Conditions

Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western</u> Region. – South-Western Cypress v.3 for prescriptions.

Tree retention Conditions

Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western</u> Region. – South-Western Cypress v.3 for prescriptions.

Site-Specific Conditions, Exclusion Zones & Modified Harvest Areas

There are no known areas of heath, rocky outcrops, cliffs and/or endangered ecological community (EEC) occurring within the net operational area that need additional harvest exclusions or modified harvesting zones implemented.

The SFO should watch out for any of these areas that may occur, record them in their SFO notes and maps and apply appropriate protection.

Large habitat trees (LHTs) recorded during traverse survey are shown on the operational map. Additional LHTs may be identified during the mark-up process.

Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western</u> Region. – South-Western Cypress v.3 for prescriptions.

Species Known or Likely to Occur

There are no known records of Threatened fauna or flora present within the planning area that require prescriptions within this plan.

Contractors and supervisory staff must immediately report any sightings of *TSC* Act, Schedule 1 and 2 species to the Supervising Forester. Appropriate action must then be taken, which may include amending the Harvesting Plan to include additional prescriptions if necessary. Refer to Section 6 and/or Section 6.2 of the <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – South-Western Cypress v.3.</u>

Fisheries Licence Conditions

Applicable Fisheries Licence conditions are detailed in the South-Western Cypress – IFOA. Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – South-Western Cypress v.3</u> for prescriptions.

Soil and Water Protection Conditions

Applicable Environmental Protection Licence conditions are detailed in the South-Western Cypress – IFOA. Refer to <u>Standard Harvest Plan Conditions for Native Forest</u> <u>Operations in Western Region. – South-Western Cypress v.3</u> for prescriptions.

Site-specific EPL conditions – The following features occur within the planned area. Refer to operational map for more detail.

Elements	Conditions
Unmapped Drainage Lines	5m Drainage Feature Protection Zone
1st order mapped drainage line or mapped drainage depression	10m Drainage Feature Protection Zone
3rd order mapped drainage line or mapped drainage depression	30m Drainage Feature Protection Zone

It is the responsibility of the SFO to identify any exclusion areas which will need to be crossed during harvesting. The SFO should then contact the Planning Forester to obtain the necessary approval.

There are no Road, snig / extraction track drainage line crossings anticipated or approved for use on drainage features within this operation.

There are no drainage feature crossings proposed to be used during this operation. However, if any are required then sufficient forward notification (at least a week) is required to enable soil samples to be taken for sediment testing and Schedule 3 approvals, and their location recorded in the table below.

Drainage Feature	Road / Bush Track / Extraction Track	Soil Dispersibility Assessment Date (IFOA Clause 299)	Regional Manager / EPA Approval Date or N/A

Copies of the Schedule 3 Approvals <u>must be attached</u> and any site-specific prescriptions in those approvals must be applied as conditions of this plan

Road Works Conditions

No road works are anticipated. Product will be extracted to the eastern boundary.

Legal Conditions

This operation may only proceed while this operational plan, the relevant site safety plan and the <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – South-Western Cypress v.3</u> are held on site.

This operation must comply with the following:

- □ Standard Harvest Plan Conditions for Native Forest Operations in Western Region South-Western Cypress v.3
- ☐ Tree-marking Protocol for Native Forest Operations in Western Region South-Western Cypress
- ☐ Licence conditions issued by Forests NSW under the Forestry Act (2012).

Certificate of Clearance To Move From Current Compartment(s)
To:, Supervising Forest Officer.
I request approval to move my logging crew and all associated machinery from Compartment(s) in
Code Part 2 Timber Harvesting In Native Forests.
I certify that:
all permanent roads, trails and mitre drains have been cleared of harvesting debris;
butt damage to retained trees has been kept to acceptable limits;
all trees marked for removal have been felled;
utilisation limits have been satisfactorily met;
stump heights conform to requirements;
all hanging trees have been brought down;
all log dump sites have been satisfactorily restored as required;
harvesting debris is not accumulated around retained trees;
all accumulated litter has been disposed of properly;
all modified harvesting conditions have been complied with;
all snig track and road drainage has been installed satisfactorily and other required rehabilitation work has been completed;
all necessary repairs to damaged roads, signs, fences and other structures have been carried out.
I believe that I have met all my obligations under the conditions of the Timber Licence that applies to the area just completed and any N&PW Act Licence that applies to the area just completed, as stated in this Harvest Plan.
Signature: Licensee/Contractor Licensee No:
Licensee/Contractor
Date:
As a result of inspections of the logging operations carried out in accordance with this Harvest Plan, I am satisfied that, to the best of my knowledge, the harvesting licensee/contractor responsible for this harvesting operation has satisfactorily completed all work. Approval is given for her/him to remove her/his machinery and equipment and leave the area/commence operations in another harvesting plan area, being: Compartment(s):, in State Forest. This clearance does not release the licensee/contractor from any obligation to undertake any remedial work if deficiencies, found during any inspections of the area made within 12 months of the date of this post-harvesting inspection, are shown to have resulted from inadequate practices during the harvesting operation. Date of last inspection of the area by the Supervising Forest Officer:

Note: The purpose of this log is to track amendments to the Harvest Plan from time of first approval. All maps, Harvest Plans etc. are to be clearly identified with a version # and date so that changes to the Plan may be clearly identifiable. The Harvest Planner is responsible for ensuring all amendments are implemented, recorded and filed

Supervising Forest Officer's Hand-Over Acknowledgment

I confirm that I have received a copy of the Harvest Plan for the above Compartment. I have been briefed on the conditions of the Plan and the progress of the operation. I understand the requirements for supervision and operational control, as explained to me by the current SUPERVISING FOREST OFFICER.

RECORD OF INCIDENTAL THREATENED PLANT OR THREATENED FAUNA FEATURE SIGHTING

- For each occurrence/population sighted/identified, a separate form 5 must be filled out and provided to the Region Ecologist as soon as practicable. The details must also be recorded on this form in the Supervising Forest Officer's copy of the operational plan, with the date the separate form 5 went to the Ecologist.
- Some features or species require no further prescription but should still be recorded while other features or species require an immediate prescription and/or further survey before logging may continue in the vicinity.
- Locations of species/features recorded on this form should be noted on the operational map.
 IR form = incidental record form 5. ECO = Regional Ecologist
