# FORESTRY CORPORATION OF NEW SOUTH WALES WESTERN REGION NATIVE FOREST HARVESTING PLAN

Refer: FPC 2010/01

# Western Land Lease - "Junction Park" 3836

#### Certification

This plan has been prepared in accordance with the Integrated Forestry Operations Approval issued under the Forestry and National Park Estate Act 1998. The <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region – Riverina Red Gum apply to this operation.</u>

# **Description of Proposal**

High and low quality sawlogs as well as green and dry residue logs will be harvested under regulation of the Integrated Forest Operations Approval for Riverina Red Gum (RRG IFOA).

The operation will use mainly mechanical harvesting to produce logs and forward them to dumps. The logs will be removed from the forest by truck.

Natural regeneration is planned. No after-harvest burning or planting is proposed.

Attachment 1: Site Safety Plan prescribes the safety requirements and Medical Emergency Evacuation Plan for this harvesting operation.

No construction, reopening or upgrading of roads or bush tracks is proposed. Maintenance of existing roads will occur on an 'as needs' basis in agreement/conjunction with the Western Lands Lease holder.

#### **Area Identification and Yield Estimates**

State Forest	Compartment/s	Region	Management Area	Harvest Plan ID
Western Land Lease	3836	Western	Mildura	

COMPARTMENT	3836
Event ID	
Gross Area (ha)	3149 ha
Net Harvest Area (ha)-Tract	835 ha
Estimated Yield HQL Sawlog (m <sup>3</sup> )	100 - 500m <sup>3</sup>
Estimated Yield Other Sawlog (m <sup>3</sup> )	200 - 2000m <sup>3</sup>
Estimated Yield Residue (t)	1000 - 4000t

# Silviculture and Harvesting Prescriptions

Western Lands Lease 3836 is largely used by the lease holders as a cropping and grazing property. There is Red Gum forested land along the bends and low ground along the Murray River, with Black Box into the higher ground.

Selective sawlog operations occurred on the lease prior to 1998. This harvesting event left behind large amounts of on-ground residue and did not treat the densely stocked stands of re-growth or dead and dying cohorts.

Harvesting to remove on-ground residue was approved in 2005 and has been continuing intermittently since then, affected by floodwater over multiple flood events since 2010. As at April 2013 there still remains a significant amount of on-ground residues to recover, as well as the need to conduct thinning and single tree selection across over the harvestable area.

#### Silvicultural Planning

Given the diverse stand structure, a number of techniques will be employed by the Supervising Forest Officer (SFO) across the forested area, including Single Tree Selection in the less stocked areas, along with both Thinning where required.

# Single Tree Selection

Across the planning area, Single Tree Selection (STS) must remove the overstorey to allow regeneration to develop.

- In higher quality areas STS must remove the commercial older overstorey trees and retain the younger vigorous trees of the advanced regeneration (the useful growing stock) – STS Release
- In areas of poorer quality (dead and dying), or where no second stratum is present, STS must remove commercial trees that have reached their end point, creating gaps for regeneration – STS Regeneration

#### **Thinning**

Thick stands of early mature/juvenile trees will be thinned from below to provide adequate spacing to allow the remaining dominant and co-dominant trees to maintain vigour.

- Thinning must be from below, removing the commercial trees with the poorest growth or commercial potential (usually suppressed, subdominant or smaller diameter codominant trees, or damaged/diseased trees) and retaining the trees with the best growth and commercial potential (usually dominant or larger diameter codominant trees).
- Retained dominant and codominant trees of the same age class must be spaced far enough apart so that their crowns have just enough room to grow together again by the time of the next harvesting operation (approximately 25 to 30 years).
- Retained basal area of dominant and codominant trees must be at least 12m²/ha (within the net operational area).

#### **Harvesting Prescription**

Stand type	% of net area	Area (refer to HPOM for details)	Treatment  Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for more detail.	
Mature to over- mature Red Gum	75%	Harvest tract	<ul><li>STS Release</li><li>STS Regeneration</li></ul>	
Early mature to mature thick Red Gum stands	25%	Harvest tract	Thinning	

The SFO will ensure that all relevant tree retention and silvicultural prescriptions are met during harvesting operations. The area of any change to the silvicultural treatment must be mapped and recorded in the Post-logging information section of this plan, and on the Harvest Plan Operational Map.

The operation must, as far as practicable, not damage individual plants of good form regeneration or sapling size red gum, especially where there are few others nearby.

# **Tree Marking**

Tree marking will occur in buffer zones and areas the SFO deems necessary under the conditions as listed in Standard Harvest Plan Conditions for Native Forest Operations in Western Region. - Riverina Red Gum. The SFO will advise the operator, through the provision of a mapped area, the areas Tree Marking is to be followed.

Where an area is marked for **retention**, the operation must, as far as practicable:

- For the allowed species, fall each tree not marked for retention, unless it clearly does not meet the product standard, and
- Not fall or damage trees marked for retention, or marked as boundary trees.

#### And / or

Where an area is marked for **removal**, the operation must, as far as practicable:

- For the allowed species, fall each tree marked for removal, unless it clearly does not meet the product standard, AND
- Not fall or damage trees not marked for removal, particularly those marked for retention or marked as boundary trees.

# **Special Conditions**

# **Critical boundaries**

The lease is bounded by fences and the Murray River on all sides. Refer to the Operational map for more detail. Marking of the lease boundary may not be necessary on all boundaries.

All boundaries on the Operational Map, except lease boundaries, are indicative only. Actual boundaries established in the field, for example between River Red Gum and other forest types, have precedence over boundaries shown on the Operational Map

- Non harvest areas, including the boundary of Protected forest types, are to be located in the field based on observable, rather than mapped, conditions.
- The SFO must report to the Supervising Forester where discernible differences are noted between the mapped and actual boundaries and record any changes in the SFO's copy of the Harvest Plan.

# **Research / Inventory Plots**

There are no plots within the lease.

#### Leases/OPs

The area is Western Lands lease. The lessee's rights must be respected. In particular:

- Fences. No fence may be damaged except at places approved by the Supervising Forest Officer. Any damage to a fence by the Contractor must be immediately reported to the lessee via the Supervising Forest Officer and fixed immediately by the Contractor.
- Gates and roads. The Contractor must keep the gate(s) on the property as found (open or closed). Existing roads must not be blocked or damaged. Any damage must be repaired immediately.

- Debris and stumps. Trees must be felled to minimise the level of work required to stack, pile and burn the tree heads on completion of the operation if requested by the lessee, outside of this harvest plan.
- Apiary Sites. A 20m buffer must be applied around each bee hive encountered.
- Buildings and dwellings. There are a number of buildings and dwellings at the Junction Park homestead, though these fall outside of the harvest tract, movement by associated harvest traffic past this are should be with arrangement with the lease.

# **Transmission Lines/Cables/Pipelines**

No powerlines have been recorded in the corporate system, though harvesting operations should expect small lines around dwellings and farm sheds.

# **Forest Management Zoning Conditions**

FMZ 3A A Drainage Feature Protection Zone (20m exclusion) occurs along the Murray River, the Tualka Creek and wetland areas as indicated on the Operational Map.

- A modified harvesting zone, a minimum of 30m wide, must be established around and adjacent to the 20 metre exclusion zone.
- Log dumps and sawmilling/processing sites are prohibited within the drainage feature protection zone and buffer strips.

A 30m buffer zone also applies to both mapped and unmapped drainage depressions without mapped exclusion zones on the operational map that meet the IFOA criteria. and is to be marked-up by the SFO.

See Standard Harvest Plan Conditions for Native Forest Operations in Western Region. - Riverina Red Gum for conditions of tree marking and modified harvesting zone.

FMZ 4 'General Management' occurs within the compartment (shown on HPOM). Normal harvesting prescriptions apply in this area.

# **Cultural Heritage Conditions**

If a site that might be a cultural heritage site is found:

- Its location must be promptly reported to the Forestry Office via Supervising Forest Officer.
- A 20m no-harvest zone must be applied around this site until advised otherwise

The SFO must record the location of all cultural heritage sites on the Operational Map, and report to the Supervising Forester.

- An exclusion zone around an Aboriginal scar tree must be a minimum of 20 metres
- An exclusion zone around a midden or artefact must be a minimum of 10 meters
- Harvesting machinery must not operate on sandhills.

#### Flora and Fauna Conditions

The SFO must search for threatened species and mark-up the block as per the <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region.</u> – Riverina Red Gum.

# **Mark-up Conditions**

Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum</u> for prescriptions.

# **Tree retention Conditions**

Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum</u> for prescriptions.

# Site-Specific Conditions, Exclusion Zones & Modified Harvest Areas

There are no known areas of endangered ecological community (EEC) occurring within the net operational area that need additional harvest exclusions or modified harvesting zones implemented.

The SFO should watch out for any of these areas that may occur.

Some drainage lines to assess and sand hills were found during Flora and Fauna traverse, as shown on the HPOM. The SFO is to apply the relevant conditions on assessment of the features.

Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum</u> for prescriptions.

# **Species Known or Likely to Occur**

No observations or historical records of threatened fauna or flora features, or those listed in Clause 168 of the IFOA, have been made on the lease that require prescriptions within the plan. The SFO should watch out for any of these that may occur. An observation of Regent Parrots flying over the area was made; relevant prescriptions will be put in place where a nest of the Regent Parrot is confirmed.

Contractors and supervisory staff must immediately report any sightings of Schedule 1 and 2 species to the Supervising Forester. The Harvesting Plan must then be amended to include additional prescriptions if necessary.

Threatened species and habitat feature	IFOA Clause	Site-specific prescription / Buffer radius		
Superb parrot nest	198	100m		
Regent parrot nest	198	100m		
Square-tailed kite nest or roost	198	200m		

Threatened species and habitat feature	IFOA Clause	Site-specific prescription / Buffer radius
Little eagle nest or roost	198	200m
Any threatened owl nest or roost	198	200m
Spotted harrier nest or roost	198	200m
Bush stone curlew nest	198	100m
Gilbert's Whistler nest	198	20m
Gilbert's Whistler record	210	300m no 'dry' residue harvest
Microchiropteran bat roost tree	199	30m
Koala in tree	200 (1,c)	30m
Koala high-use area	200 (1,b)	100m

#### **Fisheries Licence Conditions**

Applicable Fisheries Licence conditions are detailed in the Riverina Red Gum IFOA. Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for prescriptions.</u>

# **Soil and Water Protection Conditions**

Applicable Environmental Protection Licence conditions are detailed in the Riverina Red Gum IFOA. Refer to <u>Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum</u> for prescriptions.

Site-specific EPL conditions – The following features occur within the planned area. Refer to operational map for more detail.

Elements	Conditions
Murray River	20m Feature Protection Zone
Tualka Creek	plus 30 m Buffer Zone
Mapped drainage or linkage protection zone	20m Feature Protection Zone plus 30 m Buffer Zone
Mapped drainage depression or wetland depression	30 m Buffer Zone
Unmapped drainage depression or wetland depression (>400 m²)	30 m Buffer Zone
Dams	10m

A drainage depression constitutes any channel where natural surface water concentrates and flows, averages 5m width or greater, 0.5m deep and 500m in length, and does not contain any live trees greater than 150mm dbhob within its banks.

A wetland depression constitutes any visible (average 0.5m deep at at least one point compared to general ground level) shallow, open depression of at least 400m<sup>2</sup> where there are no live trees over 150mm dbhob. They may or may not be connected to other drainage features or fed by a seasonal, permanent or intermittent water table at or slightly above the floor of the depression.

It is the responsibility of the SFO to identify any exclusion areas which will need to be crossed during harvesting. The SFO should then contact the Planning Forester to obtain the necessary approval.

There are no new road, snig / extraction track drainage line crossings anticipated or approved for use on drainage features within this operation. Existing crossings may be used and maintained.

# **Road Works Conditions**

Existing road and track network, including drainage line crossings, may be used by the operator, and will require maintenance of these as necessary or in agreement with the Western Lands Lease holder.

Existing roads and tracks part of the farm operation that run along the course of drainage features are not to be used by this harvest operation.

# **Legal Conditions**

This operation may only proceed while this operational plan, the relevant site safety plan and the Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum are held on site.

This operation must comply with the following:

- Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum
- q Licence conditions issued by Forests NSW under the Forestry Act (1916).
- **q** Forest Practices Code, Part 2, Timber Harvesting In Native Forests (4<sup>th</sup> edition
- **q** Forest Practices Code, Part 4, Forest Roads and Fire Trails (1999).
- q Integrated Forestry Operations Approval issued under Part 4 of the Forestry and National Parks Estate Act 1998 (IFOA) as amended May 2003 including associated licences:
  - o Threatened Species Conservation Licence (TSCL) issued under the Threatened Species Conservation Act 1995
  - o Fisheries Management Licence issued under Part 7 (Div 3) Fisheries Management Act 1994
  - o Environmental Protection Licence (EPL) issued under the Protection of the Environment Operations Act 1997.

Certificate Of Clearance To Mo	ve From Current Compartment(s)
To:	, Supervising Forest Officer.
	sociated machinery from Compartment(s) in area in accordance with Section 5.5 of the Forest Practices
Code Part 2 Timber Harvesting In Native Forests.	
I certify that:	
c all permanent roads, trails and mitre drains have	e been cleared of harvesting debris;
c butt damage to retained trees has been kept to	acceptable limits;
c  all trees marked for removal have been felled;	
c utilisation limits have been satisfactorily met;	
c stump heights conform to requirements;	
c all hanging trees have been brought down;	
c all log dump sites have been satisfactorily resto	red as required;
c harvesting debris is not accumulated around re	tained trees;
c all accumulated litter has been disposed of pro	perly;
c all modified harvesting conditions have been co	omplied with;
c all snig track and road drainage has been insta has been completed;	lled satisfactorily and other required rehabilitation work
c all necessary repairs to damaged roads, signs,	fences and other structures have been carried out.
c all machinery has been washed down (if require	ed) to prevent the spread of noxious weeds or pests.
I believe that I have met all my obligations under the completed and any N&PW Act Licence that applies to the	onditions of the Timber Licence that applies to the area just e area just completed, as stated in this Harvest Plan.

RA is massured at 1.3m ah				<u> </u>	·	i

BA is measured at 1.3m above the ground, and does not include stems less than 10cm diameter at that point.

# Operational plan distribution and amendment control sheet ('DACS')

Date approved by RM	Plan number	See page header	State Forest or Property/County	See page header
Date PM review is required			Compartment or Parish/Portion or Lot/DP	See page header

Amendment: Normally the supervising Forester would amend the Office, Forester and SFO copies on explaining the amendment to the SFO, and should annotate the Amendment record (Form 11) in them. The SFO (or Forester as applicable) should amend the bush crew copy/copies when explaining it to the bush operators, and should annotate the Amendment record (Form 11) in it/them.

# CERTIFICATION OF COMPLETION OF THE OPERATION

This checklist is intended to comprise the top page in the planning documentation folder / wallet

Region:	see page header	State Forest OR	see page header
		County/parish	
Management	see page header	Compartment OR	see page header
Area:		Portion, lot/DP, prop	erty

Tick when added to set	Documentation	Comment
1. c	Data search results – flora and fauna	
2. c	Data search results – indigenous cultural heritage	
3. с	Data search results – non-indigenous cultural heritage	
4. c	Copy (if any) of the flora/fauna survey report(s) (Ecologist retains the original survey data sheets)	
5. c	Copy (if any) of the indigenous cultural heritage survey report(s) and original data	
6. c	Copy (if any) of the non-indigenous cultural heritage survey report(s) and original data sheets	
7. c	Records of consultation with regulators, including specific license, consent, concurrence, etc (eg individual s120 TSL, Native Veg Act consent, concurrence from RLPB)	
8. c	Records of consultation with lessees and/or permittees	
9. с	Records of consultation with stakeholders and the community	
10. с	Copies of notifications sent (eg neighbours, Lands)	
11. c	Environmental impact assessment	
12. с	Due diligence checklist (form 10.1)	
13. с	Quality control checklist (form 10.2)	
14. c	Operational plan with signed approval pages	
15. с	The Distribution Control Sheet for the plan	
16. c	The Amendment Control Sheet for the plan	
17. c	Copies of all revisions of and amendments to the plan	
18. c	Supervising Forest Officer's copy of the plan, with diary notes (form 4), incidental records (eg forms 5, 20, 22), briefing records, post-harvest notes (form 6), other notes/annotations	
19. с	Completed clearance certificate (form 7) – only harvesting	

# I certify that:

- This file contains all documents associated with planning, implementation and recording for this operation as identified in the table above and is complete for internal/external audit purposes;
- c The relevant information from them has been transferred to the compartment history data set; and
- c The Region's geodatabase has been updated for the area completed in this operation.
