FORESTRY CORPORATION OF NSW - WESTERN REGION
NATIVE FOREST HARVESTING PLAN WRhfrt1414

Refer: FPC 2010/01

Campbell's Island State Forest - Compartment 3
Certification

This plan has been prepared in accordance with the Integrated Forestry Operations Approval issued under the Forestry and National Park Estate Act 1998. The Standard Harvest Plan Conditions for Native Forest Operations in Western Region – Riverina Red Gum apply to this operation.

Prepared by: Kelly Williamson	Endorsed by: Ross Irvine	Approved by: Andrew O'Brien
Assistant District Manager	Environment & Resources Manager	Senior Manager
Signature 	Signature 	Signature 
Date 29 / 9 / 2016	Date 5 / 6 / 2016	Date 6 / 10 / 2016

Note: Approval includes the Harvest Plan Operational Map (HPOM) with the corresponding approval date displayed on the map, verifying final approved version. Locality and forest type maps are included for information only and do not form a part of this approval.

PRE-OPERATIONAL BRIEFING (SUPERVISING FOREST OFFICER ACKNOWLEDGMENT)

I confirm that I have received a copy of the Harvest Plan for the above Compartment. I have been briefed on the conditions of the Plan. I understand the requirements for supervision and operational control as explained to me by the Forest Manager or his/her delegate.

SUPERVISING FOREST OFFICER: _____

Signature: _____ Date: _____

PRE-OPERATIONAL BRIEFING (LICENSEE/CONTRACTOR ACKNOWLEDGMENT)

No operations may commence under this Harvest Plan before the Licensee/contractor has received a formal pre-operational induction by FCNSW and written approval provided to commence operations.

I confirm that I have received a copy of this Harvest Plan and that:

- ☐ I understand the conditions of the Plan,
- ☐ I will inform all relevant people not present at this briefing, prior to them starting operations, of these aspects of the Plan, as explained to me by a Forestry Corporation officer.

Signature: _____ Name: _____ Date: _____

Position: _____ Licence No: _____

Principal licensee/contractor/other (explain)

Description of Proposal

High and Low Quality sawlogs and green and dry residue logs will be harvested under regulation of the Integrated Forest Operations Approval for Riverina Red Gum (RRG IFOA).

The operation will use mainly mechanical harvesting and processing to produce logs and forward them to dumps. The logs will be removed from the forest by truck.

Natural regeneration is planned. No after-harvest burning or planting is proposed.

Attachment 1: Site Safety Plan prescribes the safety requirements and Medical Emergency Evacuation Plan for this harvesting operation.

No construction, reopening or upgrading of roads or bush tracks is proposed. Prescriptions for maintenance of existing roads and tracks are specified below.

Area Identification and Yield Estimates

State Forest	Compartment/s	Region	Management Area	Plan Number
Campbell's Island	3	Western	Murray	44805

COMPARTMENT	3
Plan Cpt ID	56234
Gross Area (ha)	192
Net Harvest Area (ha)	178
Estimated Yield HQL Sawlog (m ³)	1500-2000
Estimated Yield LQL Sawlog (m ³)	1000-1500
Estimated Yield Residue (t)	3000-5000

Silviculture and Harvesting Prescriptions

Campbell's Island compartment 3 is bounded by private property along its north-eastern edge, by State Forest on the north west and south east, and by the Little Murray River on the south west.

It contains large areas of Site Quality 1 along the river and in the bends, changing to Site Quality 3 on the extremities bordering private property where there is less access to river water and flooding.

Between 2003 and 2005 the compartment was harvested for high and low grade logs using a combination of Thinning, Single Tree Selection (STS) and Australian Group Selection. A residue operation followed this in 2005, collecting commercial residue left behind from the logging operations.

The selective nature of the operation to produce specific log products in the previous operation has meant there are now areas requiring thinning, as well as further Single Tree Selection and AGS opportunities for the older cohort reaching their over-maturity.

Silvicultural Planning

Early Thinning prescriptions will be used over roughly a third of the compartment to reduce the stocking of densely stocked young and small diameter trees to ensure a remaining average Basal Area of at least 12 square metres per hectare. The thinning will cut from below, leaving healthy growing stock with an adequate spacing to develop into a healthy stand. Returning to these patches in 15-20 years time to undertake logging using thinning prescriptions to produce quota quality sawlogs, ex-quota sawlogs and residue will be the intention, and in 30-40 years time Single Tree Selection (STS) and Australian Group Selection (AGS) prescriptions would be used to regenerate these areas.

STS release will be used over another third of the compartment. STS release will be carried out to remove overmature trees that are dominating the understorey, taking away the impendent of competition.

AGS may be used where appropriate, estimated to be only a small area near the bends with enough space for area between gaps.

STS regeneration will be used in the final third of the compartment, to allow space for a future regenerating stand. These areas are currently very poor, with dead and dying trees that won't grow any further.

Harvesting Prescription

The following table shows estimated silviculture treatments areas for the planned compartments

Stand type	% of net area	Area (refer to HPOM for details)	Treatment <i>Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for more detail.</i>
Mature and over mature cohort	24	Bends and SQ1 in north west	• STS Release
Mature and over mature cohort	10	Bends and SQ1 in north west	• Australian Group Selection (AGS)
Poor mature and over mature cohort	34	SQ2&3 along northeast extent	• STS Regeneration
Densely stocked young cohort	32	Southern third of compartment	• Early thinning

The SFO will ensure that all relevant tree retention and silvicultural prescriptions are met during harvesting operations.

The operation must, as far as practicable, not damage individual plants of good form regeneration or sapling size red gum, especially where there are few others nearby.

Tree Marking

Unless noted by the SFO in the SFO Notes section of this harvest plan, most of the harvest area will be tree marked for **retention**. The operation must, as far as practicable:

- For the allowed species, fall each tree not marked for retention, unless it clearly does not meet the product standard, and
- Not fall or damage trees marked for retention, or marked as boundary trees.

The SFO may revert to marking for removal in sparse areas where fewer trees will be removed, these areas will be communicated to the operators. The operation must, as far as practicable:

- For the allowed species, fall each tree marked for removal, unless it clearly does not meet the product standard, *AND*
- Not fall or damage trees not marked for removal. Also must not damage those marked as boundary trees.

Any change in marking technique must be noted in the SFO Notes and these areas annotated on the Operational Map. Boundaries between the different marking strategies must be clearly defined in the field, with the harvest contractors advised of the change in marking strategy.

Special Conditions

Critical boundaries

The northern boundary on compartment 3 is bounded by private property. The remaining boundaries are surrounded by state forest.

- Merran Cuttings. Water delivery channels part of the Merran system run from the Little Murray River out to private property. Harvesting must not incur any damage to the banks or channels. If damage is to occur the contractor must repair at their cost immediately in accordance with the approval letter from the Merran Trust. A copy of this letter is to be provided as an attachment to this harvest plan.
- Fences. Fence lines run between the Forest and Private Property. No fence may be damaged except at places approved by the Supervising Forest Officer. Any damage to a fence by the Contractor must be immediately reported to the lessee/property owner via the Supervising Forest Officer and fixed immediately by the Contractor.

Alternate flood access

- Alternate Access to the harvest tract is via the adjoining private property and north east section of the third party managed levee and channel structure (the Merran Cuttings) in times of flood. An access agreement has been prepared to facilitate haulage through the adjoining private property. Harvesting operations must not commence until this access agreement has been signed by FCNSW and landholder.

Communication and preferred routes must be established with the private property land owner and followed as per the Access Agreement when using the private property access, copy attached to this harvest plan. Written permission must be in place to use the route involving the Merran Cutting infrastructure (Merran Trust). The harvesting crew is responsible for the maintenance and repair of the route during and at cessation of use of the route in accordance with the approval letter from the Merran Trust. A copy of this letter is to be provided as an attachment to this harvest plan.
- The contractor must have a detailed site safety plan that includes the harvest and haul routes. It is the contractor's responsibility to determine if the routes are unsafe or damage is likely to occur. This route must not be used when wet or it is considered that deterioration of the third party assets will occur. Harvesting operations are to cease when this route is deemed unusable and there are no alternative access routes.

Inventory Plots

Two inventory plots are located within the compartment, as per the HPOM. Normal silvicultural prescriptions are to apply.

Forest Management Zoning Conditions

FMZ 3A Harvest Exclusion

Harvest Exclusion zones of 20m occur along the boundary with the Little Murray River.

FMZ 3B Special Prescription – Buffer zones

A 30m Buffer zones is implemented on the outside of the FMZ 3A Harvest Exclusion zones, under the prescriptions listed in section 3.3 of Standards Harvest Plan Condition of Native Forest Operations in Western Region – Riverina Red Gum. Buffer zones are also applied to mapped and unmapped drainage lines that meet the requirements under the IFOA, including the Merran Cuttings.

Cultural Heritage Conditions

Four sites have been identified within the compartment.

In addition to the known sites:

- During pre-harvesting mark up, the SFO must search for sites or artefacts of cultural heritage.
- The harvesting licensee/contractor must inform the SFO of the location of all cultural heritage sites detected during the operation and must not disturb them.

The SFO must record the location of all new cultural heritage sites on the Operational Map, and report to the Supervising Forester.

- An exclusion zone around an Aboriginal scar tree must be a minimum of 20 metres wide.
- An exclusion zone around a midden or artefact must be a minimum of 10 meters wide.
- Harvesting machinery must not operate on sandhills.

Flora and Fauna Conditions

The SFO must search for threatened species and mark-up the block as per the Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum.

Mark-up Conditions

Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for prescriptions.

Tree retention Conditions

Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for prescriptions.

Site-Specific Conditions, Exclusion Zones & Modified Harvest Areas

There are no known areas of endangered ecological community (EEC) occurring within the net operational area that need additional harvest exclusions or modified harvesting zones implemented.

Trees at the below locations containing the following must be protected from harvesting by retaining the tree (MGA94 z55):

Feature	Easting	Northing
Glider sap feed tree	234595	6060843
Glider sap feed tree	234601	6060885
Glider sap feed tree	234103	6061380
Glider sap feed tree	234266	6061163
Glider sap feed tree	234517	6060625
Glider sap feed tree	234512	6060461
Small stick nest	233173	6061712

Contractors and supervisory staff must immediately report any further sightings of the following to the Supervising Forester and to apply the appropriate protection level.

- Bat tree roosts
- Glider sap feed trees
- Raptor nest trees
- Nests (other than mud nests) of any species of protected bird
- Silver wattle
- Native cherry
- Yellow gum
- Endangered Ecological Communities

Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for prescriptions.

Species Known or Likely to Occur

There are no known records of Threatened fauna, flora or habitat features present within the planning area that require prescriptions within this plan, other than Glider sap feed trees and a stick nest referred to in the above table.

Contractors and supervisory staff must immediately report any sightings of Schedule 1 and 2 species to the Supervising Forester. The Harvesting Plan must then be amended to include additional prescriptions if necessary.

The species and habitat features that could possibly occur in the Campbells Island State Forest area are listed in the table below. If species or habitat features are

recorded within the compartment or nearby the mark up and harvesting operations, the associated species protection zones are implemented.

Threatened species and habitat feature	IFOA Clause	Site-specific prescription / Buffer radius
Superb parrot nest	198	100m
Regent parrot nest	198	100m
Square-tailed kite nest or roost	198	200m
Little eagle nest or roost	198	200m
Any threatened owl nest or roost	198	200m
Spotted harrier nest or roost	198	200m
Bush stone curlew nest	198	100m
Gilbert's Whistler nest	198	20m
Gilbert's Whistler record	210	300m no 'dry' residue harvest
Microchiropteran bat roost tree	199	30m
Koala in tree	200 (1,c)	30m
Koala high-use area	200 (1,b)	100m

Fisheries Licence Conditions

Applicable Fisheries Licence conditions are detailed in the Riverina Red Gum IFOA. Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for prescriptions.

Soil and Water Protection Conditions

Applicable Environmental Protection Licence conditions are detailed in the Riverina Red Gum IFOA. Refer to Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum for prescriptions.

Site-specific EPL conditions – The following features occur within the planned area. Refer to operational map for more detail.

Elements	Conditions
Drainage Feature Protection Zone – Little Murray River	20m Harvest Exclusion zone 30 m Buffer Zone
Mapped drainage depression – Merran Cuttings or Unmapped drainage depression or wetland depression (>400 m ²)	30 m Buffer Zone

A drainage depression constitutes any channel where natural surface water concentrates and flows, averages 5m width or greater, 0.5m deep and 500m in length, and does not contain any live trees greater than 150mm dbhob within its banks.

A wetland depression constitutes any visible (average 0.5m deep at at least one point compared to general ground level) shallow, open depression of at least 400m² where there are no live trees over 150mm dbhob. They may or may not be connected to other drainage features or fed by a seasonal, permanent or intermittent water table at or slightly above the floor of the depression.

It is the responsibility of the SFO to identify any exclusion areas which will need to be crossed during harvesting. The SFO should then contact the Planning Forester to obtain the necessary approval.

Road Works Conditions

Only existing roads and causeways will be used during operations and maintained for wear and tear. Any new proposed road, bush track or up-grade works necessary during the life of the operations will need to be approved by the Senior Manager via a HPOM amendment prior to their construction.

When access is limited to the route via private property all conditions set in the Access Agreement must be met, including non-access days, road maintenance, traffic limitations, set routes and changes as required by the private property owner. When also using the route via the Merran Cuttings network, as previously stated, maintenance and repair work is solely the responsibility of the harvesting crew.

Legal Conditions

This operation may only proceed while this operational plan, the relevant site safety plan and the Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum are held on site.

This operation must comply with the following:

- ☐ Standard Harvest Plan Conditions for Native Forest Operations in Western Region. – Riverina Red Gum
- ☐ Licence conditions issued by Forestry Corporation of NSW under the Forestry Act (2012).
- ☐ Forest Practices Code, Part 2, Timber Harvesting In Native Forests (4th edition 1999).
- ☐ Forest Practices Code, Part 4, Forest Roads and Fire Trails (1999).
- ☐ Integrated Forestry Operations Approval issued under Part 4 of the Forestry and National Parks Estate Act 1998 (IFOA) as amended June 2014 including associated licences:
 - Threatened Species Conservation Licence (TSCL) issued under the Threatened Species Conservation Act 1995
 - Fisheries Management Licence issued under Part 7 (Div 3) Fisheries Management Act 1994
 - Environmental Protection Licence (EPL) issued under the Protection of the Environment Operations Act 1997.

Date of cessation of logging: _____

DUMP USAGE RECORD

- Record the commencement and completion of harvesting at each dump

[illegible]

Certificate Of Clearance To Move From Current Compartment(s)

To: _____, Supervising Forest Officer.

I request approval to move my logging crew and all associated machinery from Compartment(s) _____ in _____ State Forest to the next area in accordance with Section 5.5 of the Forest Practices Code Part 2 Timber Harvesting In Native Forests.

I certify that:

- ☐ all permanent roads, trails and mitre drains have been cleared of harvesting debris;
- ☐ butt damage to retained trees has been kept to acceptable limits;
- ☐ all trees marked for removal have been felled;
- ☐ utilisation limits have been satisfactorily met;
- ☐ stump heights conform to requirements;
- ☐ all hanging trees have been brought down;
- ☐ all log dump sites have been satisfactorily restored as required;
- ☐ harvesting debris is not accumulated around retained trees;
- ☐ all accumulated litter has been disposed of properly;
- ☐ all modified harvesting conditions have been complied with;
- ☐ all snig track and road drainage has been installed satisfactorily and other required rehabilitation work has been completed;
- ☐ all necessary repairs to damaged roads, signs, fences and other structures have been carried out.
- ☐ all machinery has been washed down (if required) to prevent the spread of noxious weeds or pests.

I believe that I have met all my obligations under the conditions of the Timber Licence that applies to the area just completed and any N&PW Act Licence that applies to the area just completed, as stated in this Harvest Plan.

Signature

Contractor/Licence No:

Date

As a result of inspections of the logging operations carried out in accordance with this Harvest Plan, I am satisfied that, to the best of my knowledge, the harvesting licensee/contractor responsible for this harvesting operation has satisfactorily completed all work. Approval is given for her/him to remove her/his machinery and equipment and leave the area/commence operations in another harvesting plan area, being:

Compartment(s): _____, in _____ State Forest.

This clearance does not release the licensee/contractor from any obligation to undertake any remedial work if deficiencies, found during any inspections of the area made within 12 months of the date of this post-harvesting inspection, are shown to have resulted from inadequate practices during the harvesting operation.

Date of last inspection of the area by the Supervising Forest Officer: _____

Supervising Forest Officer _____

Note: The purpose of this log is to track amendments to the Harvest Plan from time of first approval. All maps, Harvest Plans etc. are to be clearly identified with a version # and date so that changes to the Plan may be clearly identifiable. The Harvest Planner is responsible for ensuring all amendments are implemented, recorded and filed

Supervising Forest Officer's Hand-Over Acknowledgment

I confirm that I have received a copy of the Harvest Plan for the above Compartment. I have been briefed on the conditions of the Plan and the progress of the operation. I understand the requirements for supervision and operational control, as explained to me by the current SUPERVISING FOREST OFFICER.

RECORD OF INCIDENTAL THREATENED PLANT OR THREATENED FAUNA FEATURE SIGHTING

- For each occurrence/population sighted/identified, a separate form 5 must be filled out and provided to the Region Ecologist as soon as practicable. The details must also be recorded on this form in the Supervising Forest Officer's copy of the operational plan, with the date the separate form 5 went to the Ecologist.
- Some features or species require no further prescription but should still be recorded while other features or species require an immediate prescription and/or further survey before logging may continue in the vicinity.
- Locations of species/features recorded on this form should be noted on the operational map.

IR form = incidental record form 5. ECO = Regional Ecologist

[illegible]

Supervising Forest Officer's Post-Harvesting Notes
