This site-specific working describes the important values of an individual flora reserve and identifies site-specific priorities for management. The plan is to be read in conjunction with the Flora Reserve Plan: Background and General Management document, which identifies Forestry Corporation's broad objectives and strategies for managing flora reserves. These two documents together form the flora reserve working plan in line with the requirements of section 25 of the *Forestry Act 2012*.

## 1. DETAILS OF THE RESERVE

### 1.1 LOCATION

Madmans Creek reserve is situated towards the northeastern corner in Conglomerate State Forest. The reserve is 11 kilometres northwest of the town of Woolgoolga and is 13 kilometres east of the town of Glenreagh. Madmans Creek itself is a tributary of the Corindi River, which drains into the Pacific Ocean near the village of Red Rock. See Locality Map in Appendix 1.

### 1.2 KEY ATTRIBUTES OF THE RESERVE

Under the *Forestry Act 2012*, flora reserves are set apart for the preservation of native flora.

The reserve possesses the following identified attributes that are to be protected:

- » Lowland Rainforest, a threatened ecological community
- » unique vegetation within the reserve
- » areas of cultural significance
- » representative examples of forest ecosystems in the area.

### 1.3 GENERAL DESCRIPTION

#### Area

The reserve is approximately 100 hectares in size. Comprising of Madmans Creek and extending northwards to the Conglomerate State Forest boundary. The north of the reserve is adjacent to private property.

#### Topography

Altitudes in the reserve range from about 30 to 180 metres above sea level. Refer to Appendix 2 for topographic map.

#### Geology and Soils

The soils of the reserve are red and yellow podsolics derived from Cretaceous conglomerate of the Corindi Conglomerate Series. Petrified wood also occurs abundantly in the surface soil. This wood is of the Blaxland Fossil Wood Conglomerate Member, which has been preserved by haematite replacement. Both soil types are from the Triassic period.

#### Climate

Warm temperate, with a peak rainfall during the summer/autumn period.

## Vegetation/Flora and Fauna

The special attractions of the reserve are the variety of forest types present and the existence of some unusual species within these types. The reserve contains the Threatened Ecological Community, lowland rainforest, which is classified as mixed rainforest, as well as wet sclerophyll forest (containing the forest types Flooded Gum, Blue Gum Gully, and Moist Hardwoods) and dry sclerophyll forest (containing Blackbutt, Blackbutt / Needlebark Stringybark and Ironbark / Spotted Gum). Appendix 2 Map shows the various Forest Types and their locations within the Reserve.

The area of rainforest is small. There is a form of dry rainforest, which is more typical of the semi-monsoonal areas further north. Species present in the rainforest of the reserve and normally only expected further north, include Bitterbark (*Petalostigma quadriloculare*), Silver Aspen (*Acronychia wilcoxiana*), Grey Handlewood (*Aphananthe philippinensis*) and Quinine bush (*Alstonia constricta*).

Several unusual species occur in the Semi-moist Hardwoods type. One is the Twisted Burrawong (*Macrozamia fawcettii*), which has isolated occurrences in the sandstone country from the Richmond to the Macleay, other are Kurrajong (*Brachychiton populneus*) and the Small Leaved Lilly Pilly (*Acmena smithii* var. *minor*), both unexpectedly found in this area.

Two interesting shrubs are found in the Gully type and its transitions. One is the Fern-leaved Boronia (*Boronia mollis*), the tallest of the boronias, and apart from Conglomerate State Forest known only from occasional occurrences on Hawkesbury sandstone. The other is the Tall Westringia (*Westringia amabilis*), which has a restricted distribution in other areas.

Appendix 3 and 4 outline a list of flora and fauna species known to occur within the Reserve.

## 1.4 HISTORY

### Aboriginal History and Cultural Values

Madmans Creek Flora Reserve is situated within the traditional lands of the Gumbaynggir people and there are a number of Aboriginal cultural heritage sites located within the surrounding area. The area is part of a cultural landscape, used for everyday and ceremonial activities including seasonal food and resource gathering in association with Madmans Creek, also as a travel route from the mountains to the coast. Tangible aspects of these activities are evident as walking tracks and scar trees, the remains of camp sites with stone tools (isolated stone artefact and artefact scatters) as well as sacred features and places created at the beginning of time.

### Post European Settlement

#### Harvesting

In the early 1900's, there was an operating sawmill nearby in Bark Hut Creek. Part of the rainforest has been logged, most likely for Hoop Pine (*Araucaria cunninghamii*), but otherwise appears to be undisturbed. In the early 1960's part of the reserve was logged for poles and sleepers.

#### Grazing

Some unauthorized grazing has occurred within the reserve.

#### Fire

Fire has been part of the Australian landscape for at least the last 60,000 years and most forests have experienced fire multiple times over many centuries. As the area adjoins private property, the drier sections of the reserve have been control burned regularly with wildfires occurring in the north-west portion during 2000 and another in the eastern section during 2003.

## Establishment of Reserve

The area was gazetted as Madmans Creek Flora Reserve no. 80001 on 31<sup>st</sup> October 1980. In a general renumbering of Flora Reserves in the Government Gazette of 24<sup>th</sup> July 1987, the reserve became Madmans Creek Flora Reserve No. 42.

## 1.5 CURRENT USAGE

The reserve receives limited recreational usage, primarily by visitors driving through the reserve on Murphys Road. No recreational facilities are provided at the reserve and there is no intention to develop any facilities.

## 2. SYSTEM OF MANAGEMENT

### 2.1 OBJECTIVES OF MANAGEMENT

Under the *Forestry Act 2012*, flora reserves are set apart for the preservation of native flora. The main objective of Madmans Creek Flora Reserve is to:

- » enhance the ecological quality of the lowland Rainforest, a threatened ecological community
- » protect the unique vegetation within the reserve
- » protect Aboriginal cultural heritage sites and cultural values
- » protect representative examples of forest ecosystems in the area.

### 2.2 MANAGEMENT STRATEGIES

The broad management strategies and related actions to preserve native flora and improve the value and extent of habitat in State forest flora reserves are detailed in the Flora Reserve Management Plan: Background and General Management document, which is to be read in conjunction with this plan. Specific additional management strategies applied in this flora reserve may include:

- » Property maintenance, through:
  - establishment and maintenance of appropriate fences, gates and signs
  - removal of unnecessary fencing
  - maintenance of roads and trails
  - restricting visitor use to walking trails for educational activities.
- » Conservation and improvement of habitat, through:
  - maintenance of native vegetation, which may include manipulation by mechanical means for habitat improvement
  - regeneration of any cleared or degraded land, through plantings and natural recruitment
  - weed control
  - removal of rubbish
  - management of human disturbance, including harvesting and other forest product operations
  - retention of dead timber and other habitat resources

- fire management, including cultural burning in a manner consistent with maintaining the health of forest ecosystems and in consultation with local Aboriginal communities.
- » Pest animal control.

## Cultural Values

Explore opportunities for Aboriginal community involvement in managing the flora reserve.

## Weeds

The vegetation within the flora reserve is in very healthy state with no obvious weeds present. As far as reasonably practicable, exotic species will be controlled, as detailed in section 2.4.

## Trail maintenance

Maintenance of roads and trails is important to enable access to the forest for forest management, firefighting, tourism and recreation. Poorly maintained roads can also transport significant levels of sediment, increasing the turbidity of water within creeks. This consequently reduces habitat quality and aquatic biodiversity and can take significant periods of time to recover.

Trails will be maintained as detailed in section 2.4.

## Permitted activities

Under the Forest Management Zoning (FMZ) system, Madmans Creek Flora Reserve is zoned FMZ 1 and therefore contributes to the dedicated reserve system in the Upper North East Region. Management will be consistent with the requirements of JANIS dedicated reserves and the area cannot be revoked except by an act of Parliament.

The latest operational guide detailing activities not permitted in FMZ1 is published on the Forestry Corporation website.

The following activities may be permitted subject to standard conditions approved by the delegated Manager and consistent with the management objectives for the reserve, codes of practice, forest practices/operational circulars, protocols, licenses and management/recovery plans:

- » scientific studies (e.g., fauna surveys including trapping)
- » maintenance of existing roads and fire trails
- » maintenance of existing recreation facilities and upgrading where necessary to keep pace with demand while protecting the attributes of the reserve
- » limited tree and or limb removal for safety, viewing or construction of facilities in areas used for recreation
- » pest animal and weed control
- » general access for activities such as bush walking, photography, and nature study
- » beekeeping (existing set-down sites may be used)
- » Aboriginal use of forest products consistent with the maintenance of the conservation attributes to be protected in the reserve
- » fire management will be undertaken in a manner consistent with maintaining the health of forest ecosystems.

The following activities may only be permitted with special conditions:

- » Construction of new roads. Construction will only be permitted in exceptional instances and consistent with the following principles:

- no practical alternative is available
- the attributes of the Reserve will not be significantly affected by the road or fire trail
- opportunity is provided for public comment on the proposal, obtained through advertising in the local newspaper
- Ministerial approval is given for the proposal.

## Mining

The reserve was exempted from the provisions of the Mining Acts by notice in the Government Gazette of 3<sup>rd</sup> June 1983.

## 2.3 MANAGEMENT RESPONSIBILITY

The reserve will be administered by Forestry Corporation of NSW's Hardwood Forests Division, with the authority for decision making delegated to the Senior Manager Forest Stewardship or equivalent level manager.

## 2.4 MONITORING, REPORTING AND REVIEW

The region will monitor changes to the key attributes of the reserve and will review the effectiveness of the management strategies designed to protect those attributes and to achieve the management objectives.

The results of this monitoring, review and management response will be included in annual reporting processes.

The provisions of this working plan will be amended, if necessary, in light of the results of the monitoring program and / or legislative change and with the approval of the Minister administering the *Forestry Act 2012*.
